

ABSTRACT OF THE DISCLOSURE

A facsimile apparatus which is operatively connected to a central data processing apparatus includes a performance measuring mechanism, a memory, a data reading mechanism, and a 5 data transfer mechanism. The performance measuring mechanism measures at least one performance related to facsimile operations. The memory that stores data of measurements on the at least one performance measured by the performance measuring mechanism. The data reading mechanism that receives a request 10 for data transmission and that, in response to the request, reads the data of measurements on the at least one performance stored in the memory. The data transfer mechanism that transfers the data read by the data reading mechanism to the central data processing apparatus.
